The TikiLIVE local delivery platform has been designed to accommodate remote installations who have limited Internet delivery options. This plug-n-play solution allows you to deliver and service multi dwelling or closed communities via a multi-casting or uni-casting network.

Manage the entire delivery of content locally from any Web browser and control membership access, manage payments, credits and specify content access. This solution meets the needs of those difficult installations such as remote resorts, cruise ships, island communities, tour buses and air travel.

Contact us today to order your TikiLIVE local platform installed!
